

PRESS RELEASE

e.GO with two world firsts at the Geneva International Motor Show 2019

The company is presenting a sports version of the e.GO Life and the e.GO Lux, a luxurious shuttle for private transport

Aachen, 19 February 2019 - e.GO Mobile AG will be presenting the e.GO Life electric car at the International Motor Show in Geneva 2019 (Exhibition Centre, Hall 1+2, Stand 1020) from 7 to 17 March 2019. It will go into production in March 2019. Also on show is the e.GO Life Concept Sport, a variant with more power and a sports suspension. e.GO MOOVE GmbH is showing the close-to-production version of the e.GO Mover electric bus and, for the first time, the e.GO Lux, a trendsetting type of convenient private transport.

The e.GO Life Concept Sport is the sports version of the e.GO Life. It defines itself as a product of dynamic movement and progressive performance. "The e.GO Life Concept Sport personifies the fun factor of dynamic electric driving," says Professor Günther Schuh, CEO of e.GO Mobile AG.

The e.GO Lux is an electric bus intended for private trips. The buyer has the possibility to choose the interior equipment and furnishings of the minibus. This way e.GO Lux offers travellers the opportunity to make good use of their travel time by using it as a mobile conference or living room. But before the e.GO Lux electric bus becomes a common sight on the streets, series production of the e.GO Mover will begin in April 2020 at factory 3 of e.GO Mobile AG in Aachen.

"The e.GO Mover is a trendsetter: Electric, networked and autonomous, it will help to solve the enormous challenges of city traffic. The new mobility service providers are the biggest driving force behind autonomous driving functions. Networked systems – made up of sensors, artificial intelligence, electric drives and actuators – are becoming increasingly important and ZF can supply all these from a single source. The e.GO Mover is the perfect proof of ZF's system expertise," says Torsten Gollewski, head of ZF pre-development and managing director of Zukunft Ventures GmbH. ZF Friedrichshafen AG has shares in e.GO MOOVE GmbH.

e.GO Mobile AG

e.GO Mobile AG was founded in 2015 by Prof Dr Günther Schuh as a manufacturer of electric vehicles. The more than 400 employees use the campus's unique network of research facilities and approximately 360 technology companies on the RWTH Aachen Campus. Highly agile teams work on a variety of cost-effective and customer-focused electric vehicles for short-haul traffic. e.GO Mobile AG is currently commissioning its new plant in Rothe Erde, Aachen, for series production.
